

Thanks for purchasing this add-on.

HOW IT WORKS:

1. Double-click on the thumbnails of a Smart Object (called **"REPLACE"**), and it will open a document.

Replace the text with your own or use a different font. Or paste your design in there with Ctrl/Command + V, then Close. It will ask you to Save, click Yes. Before pasting your text/logo here, you may want to delete the existing placeholder layers (or just hide them).

2. Open the file called **"3D Gold and Black Effect-STYLE"**, using the file/open menu - this will load the styles along with the patterns that are used in them. Open the "Styles" tab. This can be found in the "Windows" menu at the top of the screen. Select the Smart Object (called "REPLACE") using the 'selection tool'. Click one of the icons on the "Styles" tab and the style will be applied.

Done!
